DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the fins must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 2-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 2-8 are vague and indefinite because the preamble of the claims does not reiterate the preamble of the base claim therefore the scope of the claims is indefinite.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

5. Claims 1-5, 8, 9, 12, 13 are rejected under 35 U.S.C. 102(a) as being anticipated by Krassowski et al., Pat. 6,758,263.

Krassowski discloses a heat sink 12 for dissipating heat from the component 14 comprising: a heat dissipating substrate 16 having an aperture 20 extending from a first side to a second side, a heat dissipating stud 22 made of metal (col. 11, lines 22-30) attached within the aperture 20; the aperture is cylindrical or can be of any shape (col. 11, lines 51-55), the fins 36 are also disclosed. The method steps of claims 9, 12, 13 are necessitated by the device structure as disclosed by Krassowski.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2835

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 6, 7, 10, 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Krassowski et al. in view of Mishima et al., JP8186204A.

Krassowski discloses the claimed invention except the stud material having the CTE close to the CTE of the electronic component or intermediate between the CTE of the component and the heat dissipating substrate. Mishima discloses the heat sink with the inserted stud with the CTE close to the CTE of the electronic component or intermediate between the CTE of the component and the heat dissipating substrate. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to choose the property of the materials as disclosed by Akira in the structure disclosed by Krassowski et al. in order to provide optimum heat dissipation and integrity of the structure.
